WaveProtect Endpoint Security powered by Sophos CIXA

About Us

Wave 9 is one of the UK's most respected IT specialists focusing on the Education Sector. Our core services include Secure Managed Internet Services, Firewalls, Web-filtering, Safeguarding, Network and Telecoms

Features

Airtight Ransomware Protection

Sophos Central Intercept X Advanced (CIXA) is the industry's most robust zero-touch endpoint defense against remote ransomware. CryptoGuard technology stops malicious encryption in real-time and automatically rolls back any affected files to their original state, minimizing business impact. Sophos Endpoint's universal approach uses advanced analysis of file contents to protect your data from both local and remote ransomware attacks, including new variants.

Straight out of the box, Sophos Endpoint builds on the basic protection available in Microsoft Windows, adding more than 60 proprietary and preconfigured exploit mitigations. Sophos Endpoint protects against fileless attacks and zero-day exploits by stopping the techniques used by adversaries throughout the attack chain.

Account Health Check

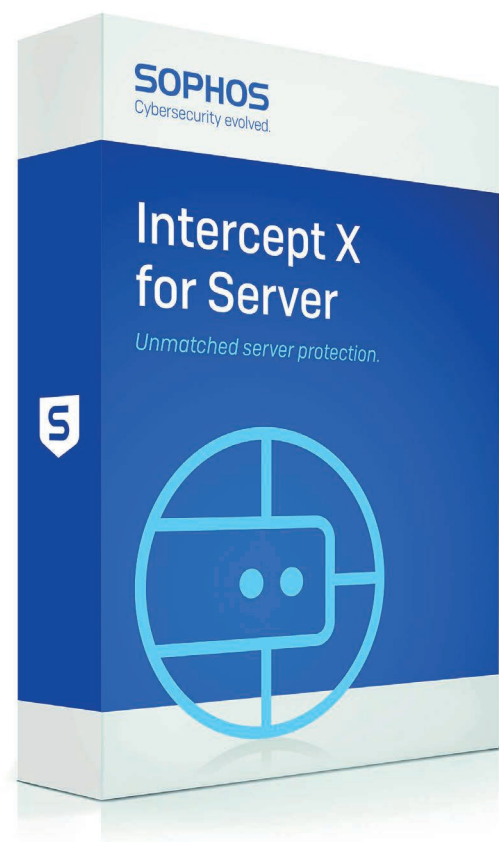

Poorly configured policy settings, exclusions, and other factors can compromise your security posture. The account health check feature identifies security posture drift and high-risk misconfigurations, enabling administrators to remediate issues with one click.

What this means for you

- Cost-effective AV and Ransomware protection
- Easy deployment and management
- Synchronised Security across firewall/device/server
- Block compromised devices
- Easy upgrade to Managed Detect and Response (MDR)
- Suitable for Windows and macOS

Synchronised Security

For our customers who are using our Managed Sophos XGS firewall service, CIXA will integrate completely, a feature called Synchronised Security. Single dashboard management and visibility estate wide and infected endpoint isolation from the network. Intercept X is managed via Sophos Central, the cloud-management platform for all Sophos solutions. It's a single pane of glass for all of your devices and products, making it easy to deploy, configure and manage your environment even in remote working setups.
